There were over 352,000 comments posted on Adobe's Photoshop Sketch blog, and another 23,000 images submitted to be used in the Photoshop Sketch contest. These Photoshop Sketch images range from portraits to cartoon characters. Eventually, drawing and painting apps like Brushes, Sketchbook, and Painter are also being powered by the application. Perhaps the biggest new feature introduced by the update is the new Screen Shake tool. The Screen Shake tool is a new camera-like feature in Photoshop. It allows users to encapsulate an image that often includes distracting elements like people's faces, which can be blurred out or hidden. The idea is that in the future, this feature could be used to blur and hide distracting elements, such as people's faces. However, that's not the purpose of how it's currently being used. **Above:** This is an image with a person's face showing through the blurred people's faces in a previous step. A screen shake is like a video overlay displaying a variety of 'live' filters as you apply them to a photograph. **BELOW:** This is how a screen shake looks when applied to a file. After trying Screen Shake for a bit, it was clear that most people, including myself, aren't using it to blur out distracting faces when creating graphics, except for those that are just photographing their friends or family (or who want to dress up as them). It can be used for either of those purposes. An example of when it's used for photographing people:

Plug-ins - The Photoshop plug-in framework provides a common set of tools and coding libraries to all plug-ins and extensions, so you can reuse the shared code across your projects. **Layers** - A workspace made up of one or many layers. Select a layer to edit and perform special effects, then combine layers like cutout pieces of one image over another. Create your own layer styles, which are predefined background rules or layer effects that you can use on subsequent layers. Apply a layer style to one or more layers to create a variety of effects. You can also create a new layer style by taking advantage of the Photoshop Camera Raw filter effects by using an adjustment layer. **Color Splash** - Using an Adjustment Layer you can quickly add a splash of color to dull or monochrome images. The Adjustment Layer is exclusive to Photoshop and offers perfect control over the area of color that you apply by using the masking tools to outline or encompass only certain portions of the image. **Adjustment Layers** - Control two important adjustments in one: contrast and color, and opacity, color, and saturation. Create your own custom Adjustment Layers that will allow you to position, mask, and adjust each of these effects in just one place in your image. **Selections & Refine Edge** - Select an edge of the image, then refine that edge using the Selection Brush. You can choose from several brush presets that are built into your image-editing software.
