The ability of Photoshop to operate offline in the cloud keeps it relevant in a mobile world. The tools that need work on a larger canvas—image cleanup and blemish removal—are terrific on the iPad Pro's 9.7-inch display. (The Quick Fix tool is a very decent alternative to the Spot Healing brush.) And the catalog is incredibly useful. In fact, photos that are already in Photoshop can be edited on the iPad Pro. You can mark them up and then save them back to the original format (JPEG or TIFF). You can even throw a photo into Photoshop while still working on it in Photos. Photoshop's keyboard shortcuts are kind of cumbersome, but the standard Google Keyboard shortcuts work in Photoshop and most similar desktop software. And Dropbox integration makes it easier to move files back and forth between Mac and iPad. Some features that appear in Photoshop CC on the desktop, like Liquify, are still confined to the Mac version, but Adobe is hoping to add them to the Windows, Android, and iOS versions. The newly introduced Smart Sharpen and Lens Correction tools are very useful for removing noise, vignetting, green fringing, and other adjustments. Smart Sharpen is best on dark photos, but it didn't work that well on my sample image, but it was pretty spot on. You also can try out some other tools, like the Transfer Effects tool, that allow you to clone from one image to other, or create brush presets. And if you're moving a lot of images from one location to another, it's nice to know you can re-use an exported image file rather than having to re-export every time.
